Agromet Advisory Bulletin

Date : 13-08-2024

Weather Forecast of District HOOGLHY(West Bengal) Issued On : 2024-08-13(Valid Till 08:30 IST of the next 5 days)

Parameter	2024-08-14	2024-08-15	2024-08-16	2024-08-17	2024-08-18
Rainfall(mm)	17.0	10.0	17.0	21.0	20.0
Tmax(°C)	31.0	31.0	30.0	29.0	31.0
Tmin(°C)	26.0	25.0	24.0	24.0	25.0
RH-I(%)	85	86	88	83	83
RH-II(%)	57	64	57	67	64
Wind Speed(kmph)	14	14	17	15	11
Wind Direction(Degree)	201	202	204	238	225
Cloud Cover(Octa)	8	8	8	8	8

Weather Summary/Alert:

Light rainfall is predicted in the next few days. * Partly to mainly cloudy sky is expected in the next few days.* Relative humidity will be in the range of 57-88%. * Maximum temperature is expected to be around 29.0- 31.0 degree and minimum temperature is likely to be 24.0-26.0 degree.

General Advisory:

As moderate to heavy rainfall received in some districts(Purbo Bardhaman & Hooghly district) along with heavy amount of water release from DVC Barrage , deep water stagnation is there in the main field where just transplanted kharif paddy field was found fully submerged , gap filling with extra seedlings should be done after water comes down at proper level. Avoid water stagnation inside just transplanted vegetable field & Immediately drain out excess water from the field. Those who have extra seed or have the chance of collecting extra seed , if are interested in Rice cultivation only , may prepare seedlings in DAPOG method in 10-14 days and may complete transplanting in 15-18 days. Those who are interested in alternate planting, Mung or Kalai may be good option.

SMS Advisory:

Complete Jute harvesting and start retting.

Crop Specific Advisory:

Crop (Stage)	Crop Specific Advisory
RICE (Transplanting)	As moderate to heavy rainfall received in some districts(Purbo Bardhaman & Hooghly district) along with heavy amount of water release from DVC Barrage , deep water stagnation is there in the main field where just transplanted kharif paddy field was found fully submerged , gap filling with extra seedlings should be done after water comes down at proper level. Those who have extra seed or have the chance of collecting extra seed , if are interested in Rice cultivation only , may prepare seedlings in DAPOG method in 10-14 days and may complete transplanting in 15-18 days. Those who are interested in alternate planting, Mung or Kalai may be good option.

Crop (Stage)	Crop Specific Advisory
JUTE (Harvesting)	Utilising rain water of last few days retting may be continued . Crizaf-Sona powder may be added at the time of retting to reduce the retting time and improve the quality of Jute fibre.
GREEN GRAM (Sowing)	Farmers are advised for preparation of land for sowing of kharif Green Gram and Black Gram or Kalai . Dhaincha may be sown at this time to enhance nitrogen. Before sowing, treat the seed with carbendazim or thiram @ 2 g/ Kg seed or talc formulation of trichoderma viride @4 g/kg seed, then treat with biofertilizer Rhizobium @ 25 g/ Kg seed. Apply fertilizers basally at final land preparation for rainfed crop @ 12.5 kg N + 25 kg P2O5 + 12.5 kg K2O +10 kg S*/ha. In kharif season, 15 to 20 kg seed per hectare is required. Line sowing of Kharif Mung or Green Gram (row to row 30 cm, plant to plant 10 cm)and Kalai or Black Gram or Urd (row to row 25 cm , plant to plant 10 cm).Thinning may be done to already sown crop.
