Weather based Agro-Advisory

Kharif paddy

Stage : Tillering

Apply ½ of remain urea as first topdressing on 21 DAT. One hand weeding at 25-30 DAT is recommended. Cloudy and humid weather conditions may conducive for attack of Brown spot and Blast disease in rice. Judicious use of nitrogen fertilizer(reduced level and split application) and weed management in the field is advised. Farmers may use Carbendazim 50 W.P. (1 g/ lt water) or Edifenphos (1ml/ lt of water) or Trycyclazole 75 W.P.(.5g/lt of water) for chemical control of the disease. Spraying must be done on a clear sunny day. Keep 2-3 cm level of water at field. Frequent irrigation is advised in early transplanted short duration rice (Milking to Dough stage) and late transplanted (maximum tillering or panicle initiation stage) rice.
