Weather based Agro-Advisory

Kharif paddy

Stage : Maximum Tillering to Panicle Initiation

Drain the excess water immediately from the crop field. This weather conditions may conducive for attack of Brown spot, Blast disease, Sheath Blight in rice. Judicious use of nitrogen fertilizer(reduced level and split application) and weed management in the field is advised. Farmers may use

Carbendazim 50 W.P. (1 g/ lt water) or Edifenphos (1ml/ lt of water) or Tricyclazole 75 W.P.(.5g/lt of water) for chemical control of the disease. Spraying must be done on a clear sunny day. If leaf roller or stemborer moth found during inspection then Chlorothalonyl can be applied in clear weather condition.

Vegetable

Stage-

All stages (sowing, early vegetative, vegetative,flowering, maturity)

Advisory-

Maintain proper drainage in the field. Keep the furrow clean & weedfree. Arrange for spraying after cessation of rain.
